Reasons for Allowance

The following is an examiner's statement of reasons for allowance: the invention relates to a process of oxidation of ethylene in the presence of an oxidation catalyst, which is on a solid particulate support. The process is improved by using a mixture of the solid particulate support material, which has been treated with an alkali metal salt and the supported catalyst. In conventional process of ethylene oxidation, additional solid support is added to dilute the supported catalyst or for stratification. However, the additional support material has active sites, which cause the degradation of the product: ethylene oxide. In the instant invention the solid support is treated with alkali metal salt, prior to mixing it with the supported catalyst, to inactivate the sites on the solid support and thereby increase the product. The closest prior art of Matusz, US 5,739,075, discloses a similar process. However, alkali metal salt is deposited on the solid support prior to depositing the catalyst on the support. Also, the solid support of the prior art appears to be spherical having pore diameter.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
